KLR650 rear Enduro Jug rack, cross brace installation instructions

The cross brace mounts to the holes in the bottom of the Enduro Jug brackets. Mount the cross brace with the license plate slots at the top. The spacers go between the brackets and the cross brace, as shown in the drawing. Start all of the screws first, and then tighten fully. Use of Loctite is recommended.

To mount your license plate to the cross brace, use the supplied hardware and the mounting slots on the brace. **NOTE:** It may be illegal to relocate your license plate. If you *can* move it, you may be required to provide illumination for the license plate in its new location. Check local laws before relocating your license plate.

The fine print: I will gladly replace any parts that are defective through manufacture. However, because of the wide variety of riding styles and trail conditions that these parts will encounter, I cannot guarantee their survivability in all conditions.
